

Hay there guys

Welcome to yet a fresh installment of another domain method, but also you should realize there's probably like a million Free hosting methods out there but non Like i found here, this is pretty unique and i would recomend using the hosting. they seem pretty good and pretty much dedicated to their work, plus your not paying anything so...

Let's get right into it Shall we..

First what you need is either

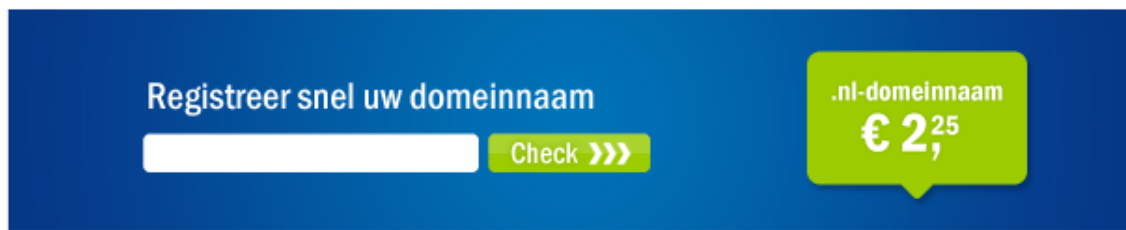

- A proxy
- or a VPN

Your proxy or vpn should be based in the netherlands area, because of course this site

Is located in the netherlands, have you got it? good now head onto this site:

<https://www.yourhosting.nl/>

And see where it says this:

Simply Enter any domain of your choice, it can be whatever domain you choose, i don't know if they support all domains but I'm pretty sure they Allow most domain forms

Now hit the check button and off we go:

Typ hier uw gewenste domeinnaam

☒ Populair ☐ Europa ☐ Alles ☐ Sedo
